YATHENDRA ANKAIAH

Product Engineer — Design & Frontend Systems

PROFESSIONAL SUMMARY

Product-focused frontend engineer with **4+ years** of experience designing and building polished interfaces, technical workflows, and public-facing web experiences. Fluent in TypeScript, React, Next.js, HTML, and CSS, with strong interaction-design and accessibility practices. Experienced translating complex scientific and healthcare concepts into intuitive products.

TECHNICAL SKILLS

Frontend: TypeScript, React, Next.js, HTML5, CSS3, Tailwind CSS

Product Design: Interaction Design, Visual Design, Prototyping, Responsive Design, Accessibility

Application Systems: REST APIs, GraphQL, Node.js, Python, PostgreSQL

Product Experience: Design Systems, Data Visualization, Usability Testing, Product Analytics

Quality & Delivery: Jest, Cypress, Storybook, GitHub Actions, AWS, Performance Optimization

PROFESSIONAL EXPERIENCE

Product Engineer **August 2024 – Present**
Cardinal Health

- Designed and built a **React and TypeScript** workspace that helped healthcare and research teams configure data-processing workflows, inspect results, and resolve validation issues.
- Transformed complex clinical and analytical processes into **guided interfaces** with progressive disclosure, clear system feedback, sensible defaults, and recoverable actions.
- Created **interactive visualizations** for model results, data quality, evaluation comparisons, and processing history, making technical findings understandable to broader users.
- Developed a **reusable design system** with accessible components, typography, spacing, color tokens, forms, tables, charts, dialogs, and responsive interaction patterns.
- Built **internal tools** for creating evaluation tasks, reviewing structured datasets, comparing outputs, recording decisions, and managing approval workflows.
- Designed and implemented polished **launch pages and technical explainers** that communicated product capabilities, scientific findings, and benchmark results to external audiences.
- Improved **accessibility** through semantic HTML, keyboard navigation, focus management, screen-reader labels, color-contrast standards, and automated accessibility testing.
- **Instrumented critical product flows** and analyzed usage, errors, and abandonment patterns to improve onboarding, task completion, and overall interface clarity.

Frontend Product Engineer **July 2020 – July 2022**
Swiggy

- Built responsive product experiences with **TypeScript, React, HTML, and CSS**, translating loosely defined customer needs into maintainable production features.
- Designed **workflow-oriented interfaces** for searching records, configuring jobs, reviewing results, resolving errors, and tracking long-running operations.
- Created **reusable components** and shared frontend patterns for navigation, forms, tables, filters, notifications, loading states, empty states, and error recovery.
- Developed public-facing **landing pages and product-launch experiences** with clear content hierarchy, responsive layouts, polished motion, and conversion-focused calls to action.
- Integrated **REST and GraphQL services** into user-facing applications, implementing typed data models, loading strategies, caching, validation, and consistent error handling.
- Improved **frontend performance** through route-level code splitting, lazy loading, asset optimization, memoization, request caching, and bundle analysis.
- Applied **accessibility standards** across keyboard interaction, semantic structure, focus order, form feedback, screen-reader support, and responsive behavior.
- Established **Jest and Cypress coverage** for critical workflows and integrated automated linting, testing, preview deployments, and quality checks into CI/CD pipelines.

EDUCATION

Master of Science in Software Engineering | University of Houston–Clear Lake

Bachelor of Engineering | Panimalar Engineering College, India
